

Do you want to study native mammals?

Would you like to do honours starting August 2009?

The following project is available for a mid-year start only to suitable candidates who have completed their BSc by the end of sem 1, 2009.

Diet of the honey possum on Perth's northern sandplains.

This project is a collaboration between Murdoch University and the Department of Environment and Conservation. The project involves field-work in bushland north of Perth, and lab work on-campus to analyse honey possum diet. This project needs a mid-year start to align with DEC's Gnangara Sustainability Strategy project.
